

BIOL 102: Anatomy & Physiology II

An integrated study of the anatomy and physiology of human organ systems with a focus on homeostasis and the role of cellular processes involved with maintaining that homeostasis. Topics include the cardiovascular, immune, respiratory, digestive, urinary, muscular, and nervous systems, as well as an introduction to metabolism, nutrition, and chemical balance. Does not apply toward a biology major or minor. 3 Theory 1 Lab. Lab fee.

Credits: 4

Lab Hours: 3

Lecture Hours: 3

Co-Requisites:

ENGL 121

Program: Biological Sciences

Semester Offered: Spring
