

BIOL 225: Field Biology

This course is a field study of the plants, animals, natural features, and climate of a particular region of North America, an island archipelago, or perhaps another continent, and may involve camping and extensive travel to National Parks, game reserves, and natural areas. It includes the study of ecological relationships in the selected study area. Offered concurrently with **BIOL 325**. Non-Biology majors should register for BIOL 225.) A field trip fee will be charged commensurate with the distance traveled. 3 Theory 1 Lab. Lab fee.

Credits: 4
